

FortiMobile™ Software

Enterprise Class Security for Smartphones

Mobility Without Sacrificing Data Security

Most professionals increase their productivity by using smartphones to email, text, and use their business and professional digital assets from the road, home, and elsewhere away from the office. Current mobile devices and mobile phones have unchained us from the confines of a corporate location, given us the ability to move freely without losing touch with our professional lives and responsibilities. Until now, the trade-off has been the risk of unauthorized access by strangers to all our important business and personal information. FortiMobile provides you this access without compromising your need for 100 percent privacy and confidentiality.

Comprehensive Device Protection

FortiMobile is a suite of light-weight applications that can be easily deployed onto Microsoft® Windows Mobile™ or Symbian™ operating system based devices. The unified security agent features for Windows Mobile and Symbian devices provide comprehensive, dynamic mobile protection, including Personal Firewall, IPSec VPN, antivirus, antispymware, and antispam. Powered by the FortiGuard® security subscription services for constantly-updated protection, FortiMobile extends the enterprise-class threat protection found in the FortiGate® product line to your mobile device. This ensures protection for corporate environments from all potential sources. FortiMobile software agents are available for Microsoft Windows Mobile, and Symbian operating systems. In addition, an SSL VPN solution is available for the Apple® iPhone® and iPod touch® products (via an application available from the iTunes® App StoreSM) delivering versatile connectivity for corporate networks.

Security Beyond Borders

The addition of FortiMobile to a Fortinet-secured network infrastructure provides additional protection for the expanding base of mobile users accessing resources behind perimeter devices. By deploying FortiMobile agents, you can ensure that this growing class of users are not only protecting their mobile devices and their respective data but they are not becoming a gateway for mobile threats to enter the corporate infrastructure.

DATASHEET

The FortiMobile Product: Integrated Mobile Protection

The FortiMobile product family provides cost-effective, comprehensive device protection and data privacy for mobile solutions that participate within corporate network environments. It defends your environment from new, sophisticated mobile originated attacks while protecting sensitive data contained within the mobile devices.

The ability to protect data contained within mobile devices ensures privacy for your organization's sensitive information in the unlikely event the device is lost, stolen, or exposed to external access. You can be assured that private data is protected with strong encryption algorithms and password protection

Features

Benefits

Deployment Scalability

FortiMobile deployments can scale to an unlimited number of devices while receiving security subscription updates from the FortiGuard update service.

Mobile Data Protection

Encryption of handset data with password protection ensures confidential information is secure from unauthorized access

Sophisticated Phone Security

FortiMobile encrypts your directory and all SMS and MMS messages as well as an incoming call filter giving you control on sensitive data and call logs

FortiMobile for Windows Mobile

FortiMobile for Symbian

SSL VPN Client for iPhone and iPod touch

FortiGate VPN Integration

A core component to the FortiMobile technology is a bundled VPN capability allowing remote users to access corporate network resources while on the go when connecting to a FortiGate security appliance. The combination of IPsec support for Windows Mobile and Symbian devices as well as a dedicated SSL VPN client for iPhone and iPod touch devices delivers flexibility for a growing diversity of users needs and devices. Strong cryptography inherent to Fortinet's VPN technology ensures end-to-end privacy for all communications when combining FortiMobile and FortiGate into an extended security solution.

FortiGuard Subscription Services

To complement the FortiMobile software solution, a threat research service is available delivering up to the minute protection from emerging security threats focused on mobility devices. This service provides automatic updates for you including:

- Automatic updates from a global redundant high-speed database infrastructure that spans the globe.
- Complete virus protection for thousands of known viruses including those emerging viruses targeting mobile devices.

FortiGuard Security Subscription Services deliver dynamic, automated updates for Fortinet products. The Fortinet Global Security Research Team creates these updates to ensure up-to-date protection against sophisticated threats. Subscriptions include antivirus, intrusion prevention, web filtering, antispam, vulnerability and compliance management, application control, and database security services.

FortiCare™ Support Services provide global support for all Fortinet products and services. FortiCare support enables your Fortinet products to perform optimally. Support plans start with 8x5 Enhanced Support with "return and replace" hardware replacement or 24x7 Comprehensive Support with advanced replacement. Options include Premium Support, Premium RMA, and Professional Services. All hardware products include a 1-year limited hardware warranty and 90-day limited software warranty.
