

SonicWALL TotalSecure Email

EMAIL SECURITY

Complete e-mail security solutions in a single, convenient package

- Award-winning anti-spam engine
- McAfee™ anti-virus
- Corporate phishing protection
- Inbound and outbound e-mail policy management
- Regulatory compliance framework
- Rapid installation and ease-of-management
- E-mail archiving
- End-user spam management
- Robust reporting
- Around-the-clock protection

SonicWALL® TotalSecure Email provides complete protection for both inbound and outbound e-mail by providing award-winning **anti-spam, anti-virus, anti-phishing, and policy and compliance management** in an easy-to-use solution. For organizations with up to 750 users there is simply no easier way to get complete e-mail protection.

To select the appropriate SonicWALL TotalSecure Email solution for your organization, choose the platform, appliance or Windows® software, and the number of users in the organization—that's it. Complete e-mail protection in one convenient, affordable package.

Features and Benefits

Award-winning anti-spam engine coupled with end-to-end attack monitoring ensures the most effective and current protection from spam attacks.

McAfee™ anti-virus combined with SonicWALL's Time Zero Technology and zombie protection provides complete e-mail anti-virus technology. Time Zero Virus Technology protects customers from the time a virus outbreak occurs until the time a signature update is available.

Corporate phishing protection ensures that organizations are protected from identity theft. SonicWALL delivers the only solution that uniquely identifies phishing e-mails and enables administrators to handle these messages independently from spam e-mails.

Inbound and outbound e-mail policy management capabilities enable IT to quickly create and enforce corporate and regulatory e-mail policies. For example, an organization can block executables or limit the size of inbound e-mail messages, add disclaimers to outbound e-mail or block e-mail going to competitors.

Regulatory compliance framework helps organizations become compliant by automating the requirements set forth by laws such as HIPAA, SOX and GLBA. SonicWALL Email Security intelligently identifies e-mail that violates compliance policies, monitors and reports the problem and uses policy-based routing to approval boxes to ensure proper review and disposition of e-mail that fail to meet organizational or regulatory requirements.

Rapid installation and ease-of-management drastically reduces the burden to implement and maintain an in-house e-mail security solution. Taking no more than an hour to install, and as little as 10 minutes a week to manage, SonicWALL Email Security is the easiest yet most effective solution available.

E-mail archiving for all or specific inbound and outbound e-mails and with SonicWALL's powerful auditing capability it is easy to locate any e-mail in the archive.

End-user spam management allows easy delegation of spam management to end users, reducing false positives and lessening the load on IT. This flexibility enables organizations to handle the differing needs of its employees while maintaining control over the e-mail system.

Robust reporting provides easily customizable, system-wide and granular reporting, including information on attack types, solution effectiveness and system performance. Reports can be scheduled and delivered via email as needed.

Around-the-clock protection is ensured as each TotalSecure E-mail solution comes with 24x7 customer support coverage.

Specifications
