

Symantec™ Endpoint Protection Mobile Edition

Overview

Symantec Endpoint Protection Mobile Edition combines multiple mobile security technologies in a comprehensive security solution. Both Windows Mobile and Symbian OS powered mobile devices can now receive the same protection technologies that organizations require on other corporate endpoints such as desktops and laptops.

Symantec Endpoint Protection Mobile Edition provides protection for mobile devices against malicious threats and unauthorized access to sensitive corporate information by utilizing award-winning antivirus technology, an advanced firewall, and SMS anti-spam protection. This helps ensure both the protection of mobile assets and compliance with internal and external security requirements. Symantec Endpoint Protection Mobile Edition provides enterprise-class management that enables administrators to centrally define and distribute security policies to mobile devices over-the-air. It also integrates with the Symantec Mobile Management solution to enable enterprise to secure and manage their mobile devices from a single management console. Integration with Symantec LiveUpdate further helps to ensure timely updates of content.

Key benefits

- Provides trusted security that enables compliance with policy and regulatory requirements
- Provides real-time protection from attacks, viruses, snoopware, data theft, SMS spam, and mobile malware
- Reduces the operational costs and complexities of policy management with a centralized management console or integration with an existing mobile device management solution
- Integrates with Symantec Mobile Management to provide unified and rich security and management for mobile devices

- Unified, single-vendor solution minimizes system incompatibilities and eases installation tasks, resulting in rapid enterprise-wide deployments
 - Effectively and efficiently protects against mobile threats with negligible impact on mobile device performance
 - Eliminates the need to manually remove SMS spam by automatically filtering messages according to configurable settings
 - Limits vulnerabilities and possible attack vectors by enabling only required phone features
-

Key features

- Antivirus—Real-time protection against threats with virus scanning and quarantining of infected files
- Antispam for SMS
- Stateful Firewall functionality to automatically configure and control inbound and outbound network traffic by network address, port, and protocol
- Integration with Symantec LiveUpdate
- Centralized over-the-air enterprise management and reporting with the Symantec Management Platform
