

Symantec™ Mobile Security for Symbian™

Threat protection for Symbian OS Series 60 and UIQ through integrated antivirus and firewall technologies

Overview

Symantec Mobile Security for Symbian provides integrated antivirus and firewall technologies to proactively protect Symbian OS Series 60 and UIQ supported smartphones against file-based forms of malicious threats, such as viruses, Trojan horses, and worms. Real-time automatic and on-demand virus scan capabilities safeguard files that are stored on the smartphone's file system, while the firewall uses protocol and port filtering to protect applications and data being transmitted. Centralized management via third-party mobile device management enables administrators to configure, lock, and enforce security policies either remotely or locally, while automatic wireless security and application updates keep on-device protection current.

Key benefits

- Protects Symbian OS Series 60 and UIQ smartphones against unwanted network intrusions, as well as viruses, Trojan horses, and worms
- Allows IT to extend existing security policies to Symbian OS Series 60 and UIQ smartphones to mitigate threats and protect the existing infrastructure
- Enables administrators to configure, lock, and enforce security policies either remotely or locally with centralized management via third-party mobile device management

Key features

- Real-time and prescheduled virus scanning and quarantining of infected files regardless of attack vector (MMS, IR, Bluetooth, email)
- Integrated stateful firewall that is configurable to protect by port and protocol for GPRS, Wi-Fi, and IP connections
- Auto-protect functionality that runs continuously and unobtrusively in the background, providing real-time intrusion prevention and threat alerting
- Advanced on-device event logging that provides extractable details on device activity
- Automatic wireless security and application updates via configurable LiveUpdate™ that keep on-device protection current
