

Symantec™ Network Access Control Mobile Edition

Overview

Symantec™ Network Access Control Mobile Edition works with Symantec Endpoint Protection Mobile Edition to enforce compliancy with security policies and ensures that only secure, policy-compliant devices can access the network and email on Microsoft® Exchange. Symantec Network Access Control Mobile Edition supports both Windows Mobile and Symbian OS mobile devices. These new devices accessing corporate resources can now receive the same policy enforcement technologies organizations require on other corporate endpoints such as desktops and laptops.

Symantec Network Access Control provides client-based integrity checking and centralized alerting of device integrity status. Assessment of host integrity status for mobile devices ensures organizations are able to consistently enforce IT policy. Centralized logging, reporting, and alerting further enables organizations to proactively monitor the status of managed devices.

Symantec Network Access Control Mobile Edition provides enterprise-class management through the Symantec Management Platform. This enables administrators to centrally define and distribute security policies to mobile devices over-the-air. It also integrates with the Symantec Mobile Management solution to enable unified security and management of mobile devices from a single management console. Integration with Symantec LiveUpdate further helps to ensure timely updates of content.

Key benefits

- Increased confidence when providing mobile devices access to confidential data and corporate email
- Organizations can verify compliance through up-to-date and archived endpoint integrity assessment data

- Integrates with Symantec Mobile Management to provide unified security and management for mobile devices
- Administrators are alerted when security incidents occur on managed devices
- Administrators can utilize the same Altiris management platform which is also used to manage the organization's desktop and server systems
- Verification that endpoint security investments such as antivirus and client firewalls are enabled and properly configured

Key features

- Assessment of devices to ensure that required technologies such as antivirus, firewall, and other security components are installed, running, and correctly configured before allowing access to the network or corporate email
- On-device verification of installed software version numbers
- Customizable server and client alerts upon host integrity assessment results
- Seamless integration with Symantec Endpoint Protection Mobile for Self-Enforcement capabilities
- Centralized over-the-air enterprise management with the Symantec Management Platform

Platform support

Mobile device

Operating Systems

- Microsoft Windows Mobile 6.0/6.1 Standard
- Microsoft Windows Mobile 6.0/6.1 Professional
- Microsoft Windows Mobile 5.0 Smartphone
- Microsoft Windows Mobile 5.0 Pocket PC
- Symbian OS 9.1 or later
- Symbian OS Series 60 v3.x

Device Storage:

- Windows Mobile 6.0/6.1 Professional – 1.8 MB
- Windows Mobile 6.0/6.1 Standard – 1.7 MB
- Windows Mobile 5.0 Pocket PC – 1.8 MB
- Windows Mobile 5.0 Smartphone – 1.7 MB
- Symbian OS – 1.1 MB

PC requirements

Microsoft ActiveSync® 4.1 or later

(for use with Windows Mobile phones)

Nokia® PC Suite

(for use with Symbian OS phones)

Microsoft Windows Vista® with Microsoft Mobile Device Center 6.0 or later (for use with Windows Mobile phones)

Enterprise manager

Processor—Pentium® III 800 MHz or faster

Memory—1 GB RAM

Hard drive—20 GB

Operating system—Windows Server 2003 SP1,

Windows 2000 Server SP4 or later

Database—Microsoft® SQL Server 2000 SP3 or SQL Server 2005

Browser—Microsoft Internet Explorer 6 SP1 or later
