

Wise Package Studio™ Standard Edition from Symantec

Basic software repackaging, customization and validation

Overview

Even if you work in a small organization, software packaging plays an important role in the IT management process. Organizations with a structured software process experience fewer deployment failures and faster software rollouts. Wise Package Studio™ Standard Edition gives you command over your software deployments with tools that help you capture installations, convert them into Windows® Installer (.MSI) format and customize them to meet corporate standards. No other tool provides this advanced functionality for such a small investment.

Wise Package Studio Standard Edition also makes it easier to migrate to new operating systems such as Microsoft® Windows 7, by identifying and remediating installation-related issues which could prevent software from installing silently or result in post-installation configuration issues.

Wise Package Studio Standard Edition is a stand-alone solution for individuals who use an ad hoc packaging approach. It provides basic packaging, customization, validation and distribution functionality, helping you quickly and reliably package applications.

Why prepare applications for deployment?

Even if you are packaging a few applications for dozens of desktops, preparing applications for deployment is an important undertaking with benefits for organizations of all sizes. Wise Package Studio Standard Edition is the ideal choice for basic packaging and customization. The benefits of using it include:

- More reliable deployments
- Faster software rollouts

- Standardized processes and desktops

Advanced application capturing and importing

Get the most complete picture possible of an installation's requirements and behavior with the industry's only complete capturing tool, SetupCapture®. SetupCapture's combination snapshot and SmartMonitor™ technology records everything that happens in an installation, giving you a thorough picture of how an installation will behave on the end user's PC. You can also automatically generate exclusion lists, specifying the files and registry keys that should not be included in the capture.

Effortless package distribution

When it's time to distribute your packaged applications, Wise Package Studio Standard Edition ensures fast and seamless deployment. Packages created with Wise Package Studio Standard Edition can be deployed by all the leading software distribution systems, including Altiris™ Software Management Solution *from Symantec* and Microsoft® System Center Configuration Manager.

System requirements

Wise Package Studio Client

- Pentium III 800 MHz (minimum), Pentium III 1 GHz (recommended), Pentium III 2 GHz (optimal)
